PI WO 2001066689 A2 20010913

DETD 4,10.4 STEM CELL GROWTH FACTOR ACTIVITY
A polypeptide of the present invention may exhibit stem cell growth factor activity and
be involved in the proliferation, differentiation and survival of pluripotent and totipotent stem
I 0 cells including primordial germ cells,. . .

It is contemplated that multiple different exogenous growth factors and/or cytokines may
be administered in combination with the polypeptide of the invention to achieve the desired
effect, including any of the growth factors listed herein, other stem cell maintenance factors, and
specifically including stem cell factor (SCF), leukemia inhibitory factor (LIF), Flt-3 ligand (Flt-
3L),. . . soluble IL-6 receptor fused to IL-6, macrophage inflammatory protein 1-]Ipha (MIP- I -alpha), G-CSF, GM-CSF, thrombopoietin (TPO), platelet
factor 4 (PF-4), platelet-derived growth factor
(PDGF), neural growth factors and basic fibroblast
growth factor (bFGF).

. . .
mature cells. Techniques
for culturing stem cells are known in the art and administration of polypeptides of the invention,
optionally with other growth factors and/or
cytokines, is expected to enhance the survival and
proliferation of the stem cell populations. This can be accomplished by direct. . .

In vitro cultures of stem cells can be used to determine if the polypeptide of the invention
exhibits stem cell growth factor activity. Stem
cells a-re isolated from any one of various cell
42
sources (including hematopoietic stem cells and embryonic stem cells) and. . . Acad. Sci, U.S.A., 92: 7844-7848 (1995), in
the presence of the polypeptide of the invention alone or in combination with other growth
factors or cytokines. The ability of the polypeptide of the invention to induce stem cells
proliferation is determined by colony forination on. . .

. . .
invention may be combined
with other agents beneficial to the treatment of the disease or disorder in question. These agents
include various growth factors such as epidermal
growth factor (EGF), platelet-derived growth
factor (PDGF), transforming growth factors
(TGF-a and TGF-]P), insulin-like growth factor
(IGF), as well as cytokines described herein.

. . .
with other
agents beneficial to the treatment of the bone and/or cartilage defect, wound, or tissue in
question. These agents include various growth factors
such as epidermal growth factor (EGF),

platelet derived growth factor (PDGF), transforming
growth factors (TGF-a and TGF-P), and
insulin-like growth factor (IGF).
. . .
matrix used in the reconstitution and
with inclusion of other proteins in the pharmaceutical composition. For
example, the addition of
other known growth factors, such as IGF I (insulin
like growth factor 1), to the final composition,
may also effect the dosage. Progress can be monitored by periodic
assessment of tissue/bone
growth and/or repair,. . .
